

## **Zigbee and PC based digital LED Scrolling Notice Board**

The project aims in designing a digital notice board with display on Scrolling LED display using a PC and Zigbee technology. We can implement this technology in schools, colleges, banks etc... After accessing every message it automatically resets and it displays the latest message on LED display.

This project consists of an onboard computer, which consists of number of input and output ports. These onboard computers are commonly termed as micro controllers. The input and output port of the controller are interfaced with different input and output modules depending on the requirements. In other words micro controller acts as a communication medium for all the modules involved in the project.

In this project we make use of a Zigbee Modem, Micro Controller and a Scrolling LED (6ft x 1ft.) display. User can send the messages to the Zigbee modem that is connected to the Microcontroller based control system. The microcontroller automatically reads the message and displays on Scrolling LED display. This process continues for every new message we send to it. The previous message will be automatically overridden by new message and buzzer alert is given for every new message.

### **Features:**

1. Messages can be sent from PC over wireless.
2. Zigbee based communication is simple to operate.
3. Low power consumption.
4. Display on Scrolling LED display.
5. Alarm system when new message is displayed.

**Advantages:**

1. Portability.
2. User-friendly interface.
3. Quick response.
4. Low power consumption.
5. Can be used by anyone who knows PC operation.

**The project provides learning's on the following advancements:**

1. Zigbee modem.
2. Zigbee modem interfacing with controller.
3. Conversion of AC supply to DC supply.
4. Embedded C programming.
5. PCB designing.

**The major building blocks of this project are:**

1. Regulated Power Supply.
2. Microcontroller.
3. Scrolling LED display with driver.
4. LED indicators.
5. Reset.
6. Buzzer with driver.
7. Zigbee Modem.
8. Crystal oscillator.

### Software's used:

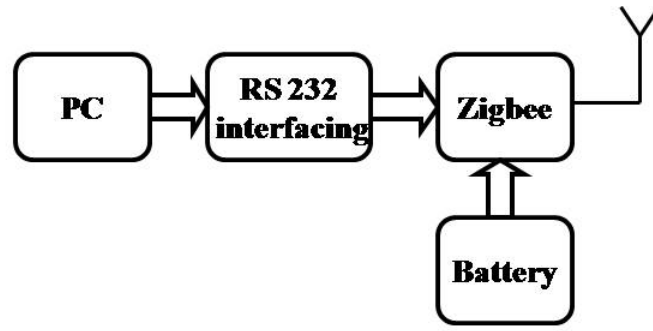

1. PIC-C compiler for Embedded C programming.
2. PIC kit 2 programmer for dumping code into Micro controller.
3. Express SCH for Circuit design.
4. Proteus for hardware simulation.

### Regulated Power Supply:
